SUMMARY

AI Builder graduating December 2025. Shipped Legal Hub end to end at AriesView, a full-stack AI job-search platform as sole founder placing Runner-Up at Wright Venture 2026 with \$2,000 awarded, and agent training data at Handshake AI's Helix project. OPT through February 2029, no sponsorship required.

HONORS & RECOGNITION

Runner - Up, Wright Venture 2026 — AccioFirst | Wright State University · April 2026 \$2,000 awarded
Technical Lead, NSF I-Corps Cohort | University of Connecticut · Sep 2024 · Spring Boot backend + LLM chatbot \$1,000 awarded

SKILLS

AI & Agents: Claude Code CLI, Ralph loop patterns, RAG pipelines, hybrid BM25 + dense retrieval, Weaviate, Docling, PyMuPDF, LLM evaluation, atomic prompt engineering, context rotation

Languages: Python, TypeScript, JavaScript, Java, SQL, Go (developing)

Web: React, Next.js 15, FastAPI, GraphQL, SQLAlchemy, Spring Boot, Pydantic

Data: PostgreSQL, Weaviate, Supabase, MongoDB

Databases: PostgreSQL (schema design, indexing, connection pooling), Weaviate, Supabase, MongoDB GridFS

Infrastructure: Docker, Azure VM, GitLab CI/CD, Vercel, Kubernetes, Playwright, k6

EXPERIENCE

Software Engineer - AriesView (NEC-backed) Aug 2025 – Present | Boston, MA

- Identified that initial RAG evaluation metrics reflected a measurement methodology flaw rather than pipeline failure, rebuilding the framework with 15 legal and financial documents and two 300-query sets to give the team its first reliable benchmarks and unblock product decisions downstream
- Owned Legal Hub end to end as a customer-facing product feature: designed the JSON extraction schema from manually analyzing 15 retail leases, built the GPT-4.1 microservice on an Azure VM, and delivered the analyst-facing interface CRE analysts use to review structured legal, foundational, and financial lease values.
- Architected the RAG pipeline for a CRE due diligence platform, designing chunking strategies, embedding pipelines, and hybrid BM25 + dense retrieval against a Weaviate vector store to power document-aware Q&A over financial and lease documents.
- Engineered a GraphQL pagination layer serving 100+ OCR-extracted document units to the React frontend one at a time, replacing a bulk-fetch pattern that would have made the product unusable under real document volumes.
- Built FastAPI endpoints with SQLAlchemy ORM, Pydantic validation, and Alembic migrations, and shipped 15+ Playwright E2E tests across GitLab CI/CD deployments.

AI Trainer, SWE & Agentic Workflow - Handshake AI — Helix Project Apr 2026 – Present | Remote - Contract

- Generate training data for autonomous coding agents on the Helix project by writing atomic prompts, managing context rotation across long sessions, and shipping golden-solution PRs verified against Pass-to-Pass and Fail-to-Pass automated gates.
- Design Ralph loop autonomy patterns and atomic prompt scaffolding that enable headless agents to iterate through software engineering tasks to strict external success criteria, developing production-grade fluency in agent prompt design.

Programming Intern - Porter Lee Corporation May – Aug 2024 | Schaumburg, IL

- Navigated a 30,000+ line Java Android codebase to build REST API endpoints for an evidence management system, reducing JSON deserialization time from ~320ms to ~140ms through optimized parsing logic.
- Implemented JWT-based authentication across all endpoints and introduced multithreaded background sync, eliminating a ~300ms UI freeze during data refresh cycles.

Programmer Analyst Trainee - Cognizant Sep 2022 – Mar 2023 | Chennai, India

- Navigated an unfamiliar Selenium + Java QA codebase, identifying 10+ critical production defects escalated to the development team before release.

PROJECTS

AccioFirst Next.js 15 · FastAPI · BrightData · Gemini 2.5 Flash-Lite · Claude 3.5 Haiku · Supabase · Vercel

- Designed and shipped AccioFirst end to end as sole technical founder: a full-stack Next.js and FastAPI application integrating BrightData scraping, Crunchbase hiring signals, and two LLM models for ghost job scoring and application diagnosis, placing Runner-Up at Wright Venture 2026 with \$2,000 in funding awarded.

RAG System — Financial Document Intelligence FastAPI · Weaviate · PyMuPDF · Docling · Python

- Architected an end-to-end retrieval pipeline ingesting unstructured financial PDFs and returning citation-backed answers via OCR ingestion, hierarchical document parsing, and hybrid BM25 + dense embedding retrieval against a Weaviate vector store.

EDUCATION

M.S. Computer Science | Wright State University

Aug 2023 – Dec 2025 · GPA 3.6
